PROFESSIONAL SUMMARY

Site Reliability Engineer with **2.5+ years of experience** specializing in building, operating, and scaling **production-level cloud infrastructure** across **AWS, GCP, and Azure**. Expertise includes **Kubernetes, Linux internals, CI/CD automation, observability, and platform security**. Proven track record of **architecting and building robust DevOps platforms**, developing **custom automation and platform services**, and achieving **high availability and zero-downtime deployments**. Successfully reduced **MTTR** and delivered **cost-effective cloud systems** that significantly improved **engineering velocity** and **operational reliability**.

EMPLOYMENT HISTORY

Site Reliability Engineer- Devops

05/2023 – Present | Pune

Johnson Controls

- Architected, ran, and scaled **production Kubernetes clusters** across **AWS, GCP, Azure, and on-premise data centers**, consistently achieving **99.9%+ uptime** for business-critical services.
- Rolled out **25+ mission-critical services** using **load testing, chaos engineering, and performance benchmarking**, validating readiness for **10,000+ concurrent users**.
- Built **end-to-end automated release pipelines** with **safety checks, health monitoring, and rollback mechanisms**, enabling **zero-downtime deployments** across teams.
- Resolved **20+ P0/P1 production incidents**, including **OOM conditions, memory leaks, file-descriptor exhaustion, and zombie processes**, reducing **MTTR by 40%**.
- Led **incident war rooms and RCA efforts**, eliminating root causes and reducing **incident recurrence by 70%+**.
- Engineered a **Kubernetes-native CI/CD platform** using **Tekton, Buildpacks, and ArgoCD**, enabling **50+ developers** to deploy via standardized, repeatable workflows.
- Automated **application releases and database migrations** using **Flyway**, cutting deployment cycles from **hours to under 15 minutes**.
- Implemented **SLO-driven monitoring and full-stack observability** (**Prometheus, Grafana, Loki, Alertmanager**), reducing **incident detection time by 45%** and **alert fatigue by 60%**.
- Managed **multi-cloud infrastructure** using **Terraform and Ansible**, achieving **<5-minute RTO** and improving compliance by **30%** through **GitOps-based IaC**.
- Delivered **25–30% cloud cost savings** through **rightsizing, automated shutdown policies, and cleanup of 200+ unused resources**.
- Designed and built **custom DevOps platform tooling**, including a **Flask-based self-service developer portal** adopted by **100+ engineers**.

Software Engineering Intern

01/2023 – 05/2023 | Chennai

Virtusa

- Developed scalable backend systems** using **Spring Boot and Java**, improving performance and modularity.
- Integrated AJAX and XML** to enhance **data flow** and user responsiveness.
- Implemented JDBC-based data access layers**, ensuring **reliable and optimized DB connectivity**.

EDUCATION

Bachelor of Science, Data Science and Applications

04/2022 – 12/2025 | Chennai, India

Indian Institute of Technology, Madras

GPA: 8.01/10

Bachelor of Technology, Information Technology

01/2019 – 05/2023 | Chennai, India

Anna University

GPA: 9.28/10

Achievements: Department Topper · University 9th Rank

CERTIFICATIONS

- Cloud Associate Engineer, Google
- Professional Cloud Architect, Google

SKILLS

Cloud Platforms: AWS, GCP, Azure

Containers & Orchestration: Kubernetes, Docker, Helm

Linux & Systems: Linux internals, performance tuning, system debugging, system calls

Infrastructure as Code: Terraform, Ansible, GitOps

CI/CD & Release Engineering: Jenkins, ArgoCD, Tekton, GitHub Actions, Flyway

Observability & Reliability: Prometheus, Grafana, Loki, Alertmanager, SLOs, alerting

Security & Compliance: SBOMs, Trivy, Finitestate, network security

Programming & Automation: Python, Go, Java

Messaging & Streaming: Redpanda, Confluent Kafka
